

LEG ARTERIES ULTRASOUND - PATIENT QUESTIONNAIRE

- Your doctor has requested that you have an ultrasound of the leg arteries performed. The purpose of this study is to assess the flow of blood through the arteries from the aorta in your abdomen to the arteries in your legs.
- Ankle brachial index (ABI) studies are also performed with this test. ABI is performed to determine the blood pressure in the leg arteries.
- This test will take approximately one and a half hours to complete.
